

## SIMPLE SWITCHING BETWEEN COMPUTER SYSTEMS BY MOVING THE MOUSE

### ZERO-TOUCH KVM SWITCHING

The Freedom II KVM Switch enables a single USB keyboard mouse user to easily access information and control operations across four USB computer systems and monitors, saving time, money, and space.

The Freedom II works like an extended desktop switch on a single computer. Once you configure your screen layout for the attached PCs, switching ports is as simple as moving your mouse cursor over the screens' X and Y borders.

Freedom is ideal in command and control applications, such as those in finance on a trading room floor. Not only can users switch between several computers just by moving the mouse, but they can also simultaneously access a mix of USB peripherals, including high-speed USB 2.0 devices.

LFEU-FREEDOMII-V1

### EASY ACCESS AND CONTROL

Easily access information and control operations across four computer systems and monitors.

### SIMPLE SWITCHING

Simplified USB keyboard/mouse access across multiple computers and analog audio support.

### IMPROVED ERGONOMICS

Improved desk ergonomics frees up desktop space for more efficient use.

### USB 2.0 SUPPORT

Also access the connected peripherals, including USB 2.0 devices.

### OSD CONTROL

Includes on-screen display and push-button control.

### AGILITY™ INTEGRATION

Integrates easily into the IP-based Agility™ switching system.

### SWITCHING PORTS BY SIMPLY MOVING THE MOUSE
