

WHEN YOU NEED TO CAPTIVATE PASSERS-BY

CREATE EYE-CATCHING VIDEO WALLS WITH AN INFINITE NUMBER OF MONITORS

The VideoPlex4000 Video Wall Controller gives users the flexibility to create individually shaped video walls with four—or more—HDMI displays. There are no restrictions on how the screens are arranged or screen sizes. Users can freely scale and position images, including rotations of up to 270°.

One image can be reproduced on each screen or cropped regions of the image can be shown on each screen. This video wall controller upscales input and outputs distortion-free images at 4K resolution, making it ideal for live camera feeds, digital signage and animated content.

UNLIMITED POSSIBILITIES

VideoPlex4000 supports non-rectangular screen arrangements and any mix of monitor orientations so users can create an almost unlimited multi-monitor canvas.

HIGH-RESOLUTION HDMI VIDEO

The standalone video wall controller/scaler outputs high-resolution HDMI video, up to 4K, to four monitors per device.

SCALABLE

Stack multiple units to create larger video walls.

ANY VIDEO, ANYWHERE

VideoPlex4000 enables easy control of cropping, scaling, rotation of video and screen gaps.

SUPER FLEXIBLE CONNECTIVITY

Dual HDMI 1.4 4K @ 30 Hz inputs and one DisplayPort 1.2 for 4K @ 60 Hz inputs.

NETWORK CONNECTIVITY

Dual-Ethernet ports allow users to add the VideoPlex4000 to their networks. Due to Ethernet looping only one connection to the physical LAN is required.

FLEXIBILITY TO CREATE INDIVIDUALLY SHAPED VIDEO WALL DESIGNS
